

Lab Activity Documentation: CatPhotoApp HTML Structure

1. Objectives

- **Understand Semantic HTML:** I Learned how to structure a webpage using modern semantic HTML5 elements (`<main>`, `<section>`, `<figure>`, `<figcaption>`, `<footer>`) to improve accessibility and document structure.
-
- **Master Text Content Elements:** I Practiced organizing content hierarchically using headings (`<h1>` to `<h3>`), paragraphs (`<p>`), and inline emphasis tags (`<em>`, `<strong>`).
-
- **Implement Hyperlinks:** Added internal and external references using anchor elements (`<a>`) with attributes like `href` and `target="_blank"`.
-
- **Embed Media Elements:** Integrated images (`<img>`) with descriptive alternative text (`alt`) and couple them with descriptive captions using figure groupings.
-
- **Create Lists:** Differentiated and built both unordered (`<ul>`) and ordered (`<ol>`) lists for structured item presentation.
-

2. Lab Implementation Overview

The lab centered on building a complete, standards-compliant HTML document named **CatPhotoApp**. The layout was structured into distinct semantic regions:

- **Header & Main Content:** Defined the primary application title and partitioned independent content sections for media galleries and itemized lists.
-
- **Media Integration:** I embedded responsive photographic content paired with semantic captions (`<figcaption>`) to provide context for screen readers and users.
-
- **List Structures:** I programmed bulleted lists for preferred items and numbered sequences for disliked items.
-
- **Footer:** Added a non-copyright attribution link pointing to the learning resource.
-

3. Conclusion & Key Takeaways

Completing this lab provided a strong foundational grasp of front-end web development principles. Key takeaways include:

- **Improved Code Readability:** Utilizing semantic elements makes the HTML document self-documenting and easier for browsers and assistive technologies to parse.
-

- **Asset Management:** Understanding how to correctly link external assets, such as images and web pages, using absolute URLs.
-
- **Accessibility Awareness:** Recognizing the importance of descriptive alternative text (`alt`) and semantic markup for creating inclusive web applications.
